Digital Door Viewers with Motion Detection Recording

Introducing one of the latest and most advanced cost effective High Tech surveillance and security devices available.

Most of us are familiar with the old peep hole viewer. Not a bad idea in it's time but the trouble is, the person on the other side of the door will see the peephole go dark when you look through. So the other person is aware the house or office is occupied. Regardless of whether the door is opened or not.

Readily available spy Reverse Peephole Viewers enable any person on the outside side of the door to actually see directly into your home and without your knowledge. It's frightening and it happens regularly. If you don't know the person on the other side, it's a good idea to be very wary of opening that door. Home invasion is all too common nowadays.

Introducing the all new and amazing colour Digital Door Viewer with Motion Detection recording. That's right, if someone presses the door chime or stands at your front door for more than 10 seconds, our HCS Digital Door Camera and Viewer will capture time and date stamped pictures or video of that person day or night and save the recording to a built in micro SD card.

Playback directly from the large colour monitor and know who has attended your premises whilst you were away. The new Digital Door Viewers offer great peace of mind to be able to clearly see who is standing at your door at any time. We have a range of models for your consideration. Some are simply a door viewer whereas other models have motion detection still and image and video recording, built in IR for night vision, touch screen setup, door chime and more. Read more below.

Digital Door Viewer with Motion Detection Recording & Touch Screen Setup

How does it work??

Pictured above is our all new and latest advance Digital Door Viewer (Model HCS-RO2B) with built in 3.5" colour LCD monitor, 2 Megapixel still image and video recorder, colour pinhole camera, door chime, supplied with rechargeable lithium Ion battery for long term activation, Touch screen display (simply amazing and easy) time and date stamp, motion detection recording, push button recording, built in Infrared (IR) for night vision, up to 32GB internal micro SD memory card and USB interface.

Now when you look closely at this Digital door Viewer, you can see in an instant this is like no other. The image above depicts two parts, the camera (gold colour alloy case) and the LCD screen which is mounted on the inside of the door.

The LCD alloy case contains a rechargeable lithium Ion battery (we supply the charger) although the LCD monitor also has a mini USB interface so users can playback recordings direct to their PC and recharge the battery within the LCD at the same time. Very easy to use and touch screen remember. Other cheaper models do not have all of the same features including motion recording, IR and may have a smaller size LCD so this model is without doubt the most popular.

The actual camera has a door chime button. Users can select the ring tone and volume etc direct from the LCD monitor. If you choose (ON/OFF Button) as soon as someone on the outside pressed the chime, the camera will record and high-resolution 2MP image or video for so many seconds and save that recording to the micro SD card.

Tell me more!!

The mini colour pinhole camera really doesn't look like a camera at all but make no mistake, this system is packed full of features. The user can freely change and save those changes at any time. If you don't want the camera to record on motion, switch the feature off. If you don't need the IR then switch off too as it only takes a moment and that's the beauty of it all, arm and disarm functions and features as you please.

As mentioned previously, to the elderly or children, women alone at home etc, its not really a good idea to open a door when your DON'T know who is on the other side. When a person on the outside presses the chime, the LCD will auto switch on. That means that those indoors can clearly see who is on the other side without pressing an eye up to a peephole. This modern features and high-resolution 3.5" colour LCD monitor so even from a distance, there is no mistake and at least you will know whether its safe enough. You can even talk to the person on the other side of the door through a built in mini microphone.

If you choose, press a button on the LCD and record the identity of the person on the other side. At night the built in IR will assist with the recording. Choose still pictures or video, its up to you.

Lets say you are away for the weekend, this system will record any person who approaches your door and you can check when you return home. Even if the person approaches your door and does NOT press the chime button, if he/she stands at the door for any more than 5-10 seconds, the camera will record anyway. The point is, this no ordinary door viewer. This is a professional Digital Recorder, door viewer and chime all in one compact and impressive looking unit. It has to give you peace of mind.

Digital Door Viewer and Recorder Features

Please note the features and functions listed below mainly refer to our RO2B and RO2G models. A specifications sheet pertaining to all 7 models are listed in a separate PDF brochure on this website page. If not sure which model best suits your needs, contact our office 1300 763235.

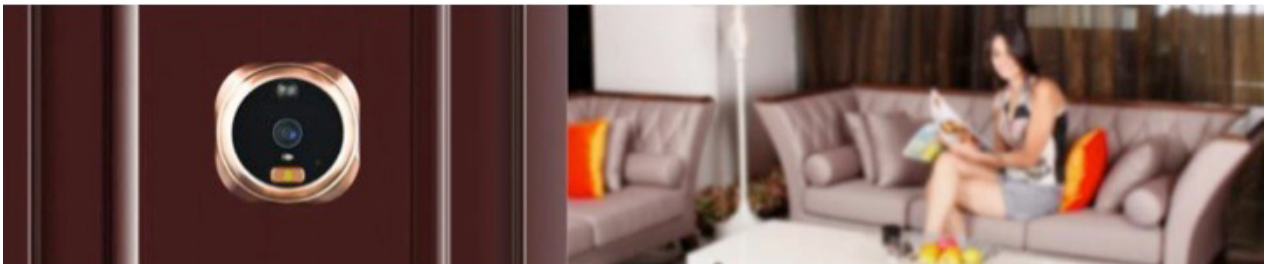

- People on the outside cannot see inside thus protecting privacy
- Simple push button to see large image without darkening the peephole.
- Easy DIY installation and rechargeable battery operated.
- 2.8 LCD Display to see clearly who is on the other side of the door
- Wide View Angle 165 degree
- 2.0 Megapixel surveillance anti-spy colour camera
- Support Micro SD card up to 32GB so many thousands of pictures & video
- Advanced energy saving technology with long standby.
- Motion detection recording
- CE/FCC/RoHS certificated.
- Door Thickness from 35mm to 110mm
- Door Hole dimensions 12mm to 28mm
- IR Night Vision
- Strong and smart looking alloy housing
- Manual and Auto Still Image & Video Recording (selectable)
- Standby battery time 1.2 months before needing a recharge
- Door Chime as standard
- Auto Motion Detection 2-3 meters from the camera
- USB charging although 240V charger supplied
- PC Sync
- Video Messaging
- DIY MP3 Ringtone
- Calendar
- Wallpaper

What are the main differences between the models?

Other than price, all Digital Door Viewers have different features and functions. The basic RO3 model for example is battery operated but it uses 3 x AA Alkaline type batteries rather than rechargeable Lithium Ion battery as supplied with the more advanced RO2B and RO2G. The RO3 has a 70-degree camera field of view, manual recording but no auto recording on motion, no door chime. No IR or auto alarm, no USB Interface and no Calendar. It is on the other hand very similar in appearance albeit a smaller 2.8" LCD display and 0.3 megapixel recording quality.

Our RO1 and RO1P models have the same smaller LCD display but the camera angle is much wider at 165 degrees. In fact all units (except RO3) are wide angle. All models except RO3 have auto and manual still image and video recording. Its best to look carefully at the specifications brochure, think carefully about your needs or call our office. The cost difference between models is minimal anyway so the RO2B and RO2G are recommended.

Pictured below is the removable lithium Ion rechargeable battery
